

More Smilies 2.0

Saturday, December 31st 2005

[More Smilies 2.0](#) is out, :!: and now has clickable smilies for the comments form (with a little edit), and clickable smilies for the admin area (no editing required). It even supports the WYSIWYG editor thanks to [Owen's](#) [buttonsnap](#) library.

2.0 Also supports Owen's [Role Manager](#) plugin. It adds the new capability, 'change_smilies'. So if you use Role Manager, you will need to assign the 'change_smilies' capability to the various roles, or you won't be able to change smilies.

Oh, and one more important note. It's only for WordPress 2.0. Do not install it on 1.5 or the sky will fall on your head. And that could hurt.
